

The Idea

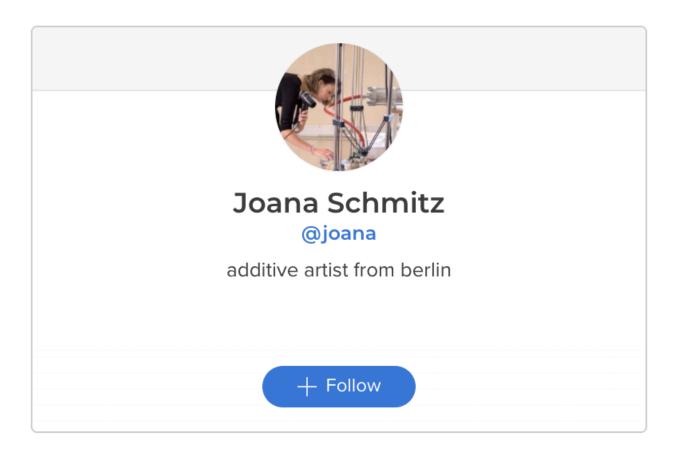

A social and collaborative platform for designing and producing physical things - a "Github for hardware". A single workspace for you to design better, prototype faster and manufacture smarter.

We call it the Internet of Production (IoP).

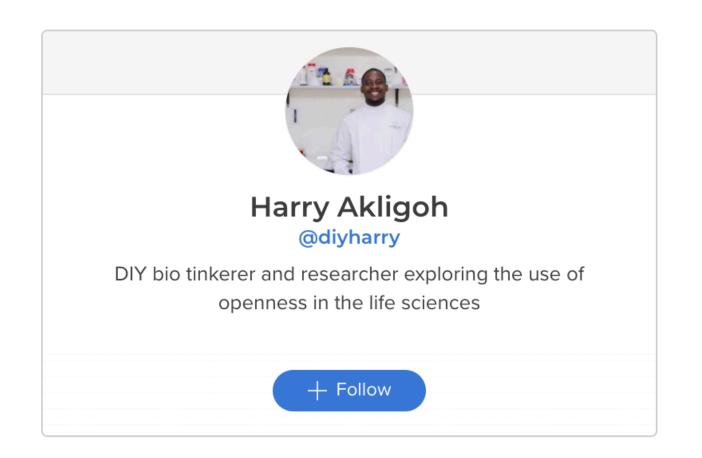

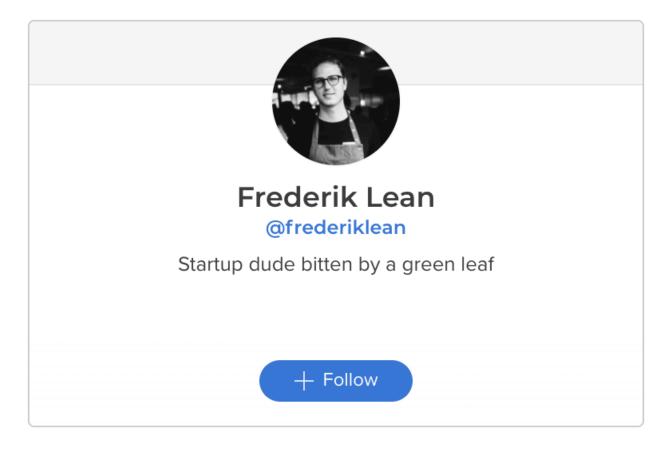

A fast growing community based on collaboration

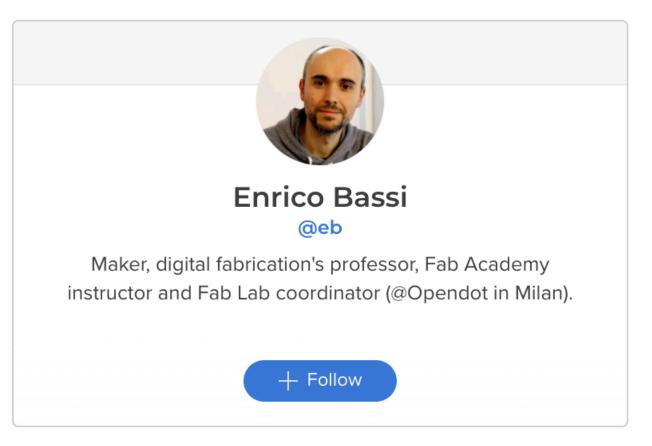

After launching our BETA in mid 2019, Wikifactory's community of makers, designers, engineers, technologists and other creative problem solvers is now 25K strong - set to reach 100K by the end of the year.

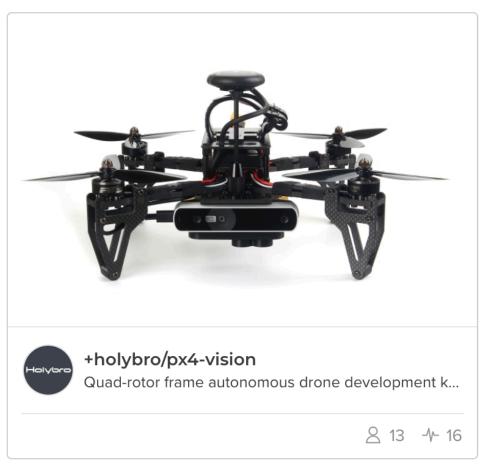

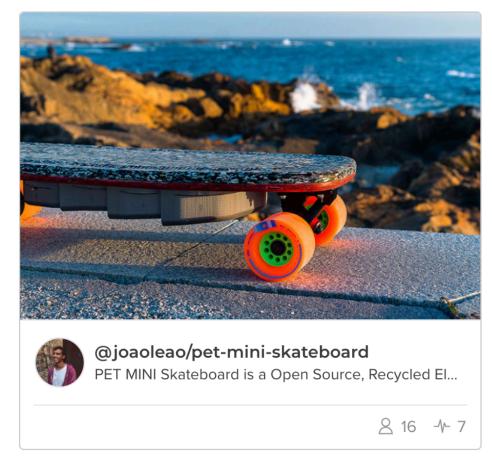

A go-to place for open hardware design and production

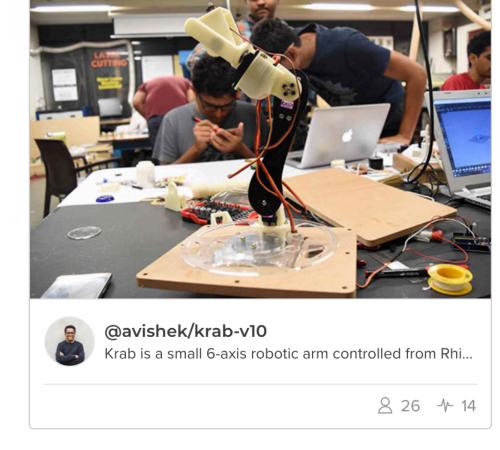

With over 1600 open hardware projects, and over 10K 3D files uploaded, our community is working in all sorts of industries. From robotics, drones and electric vehicles, to biotech, agri-tech, smart furniture - and most recently - medical devices.

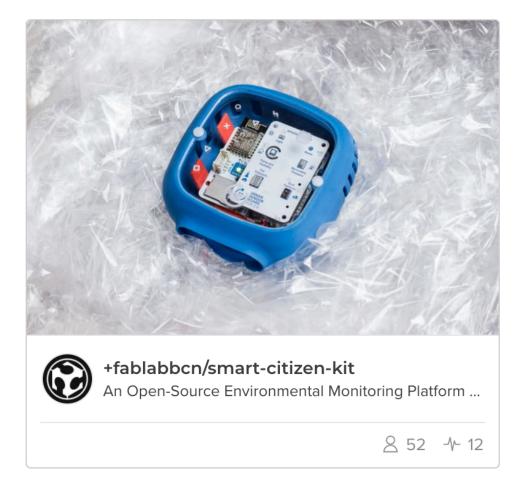

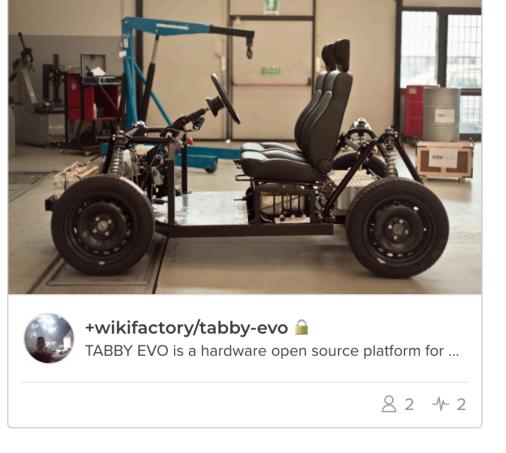

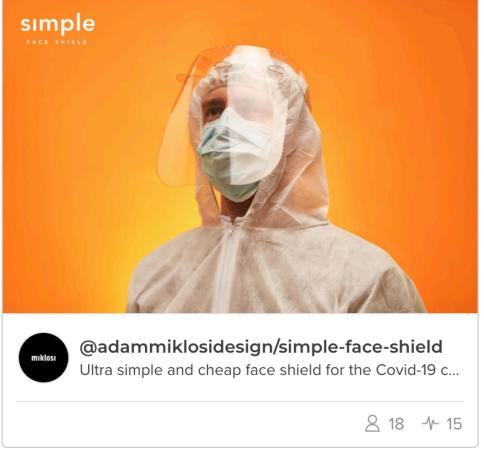

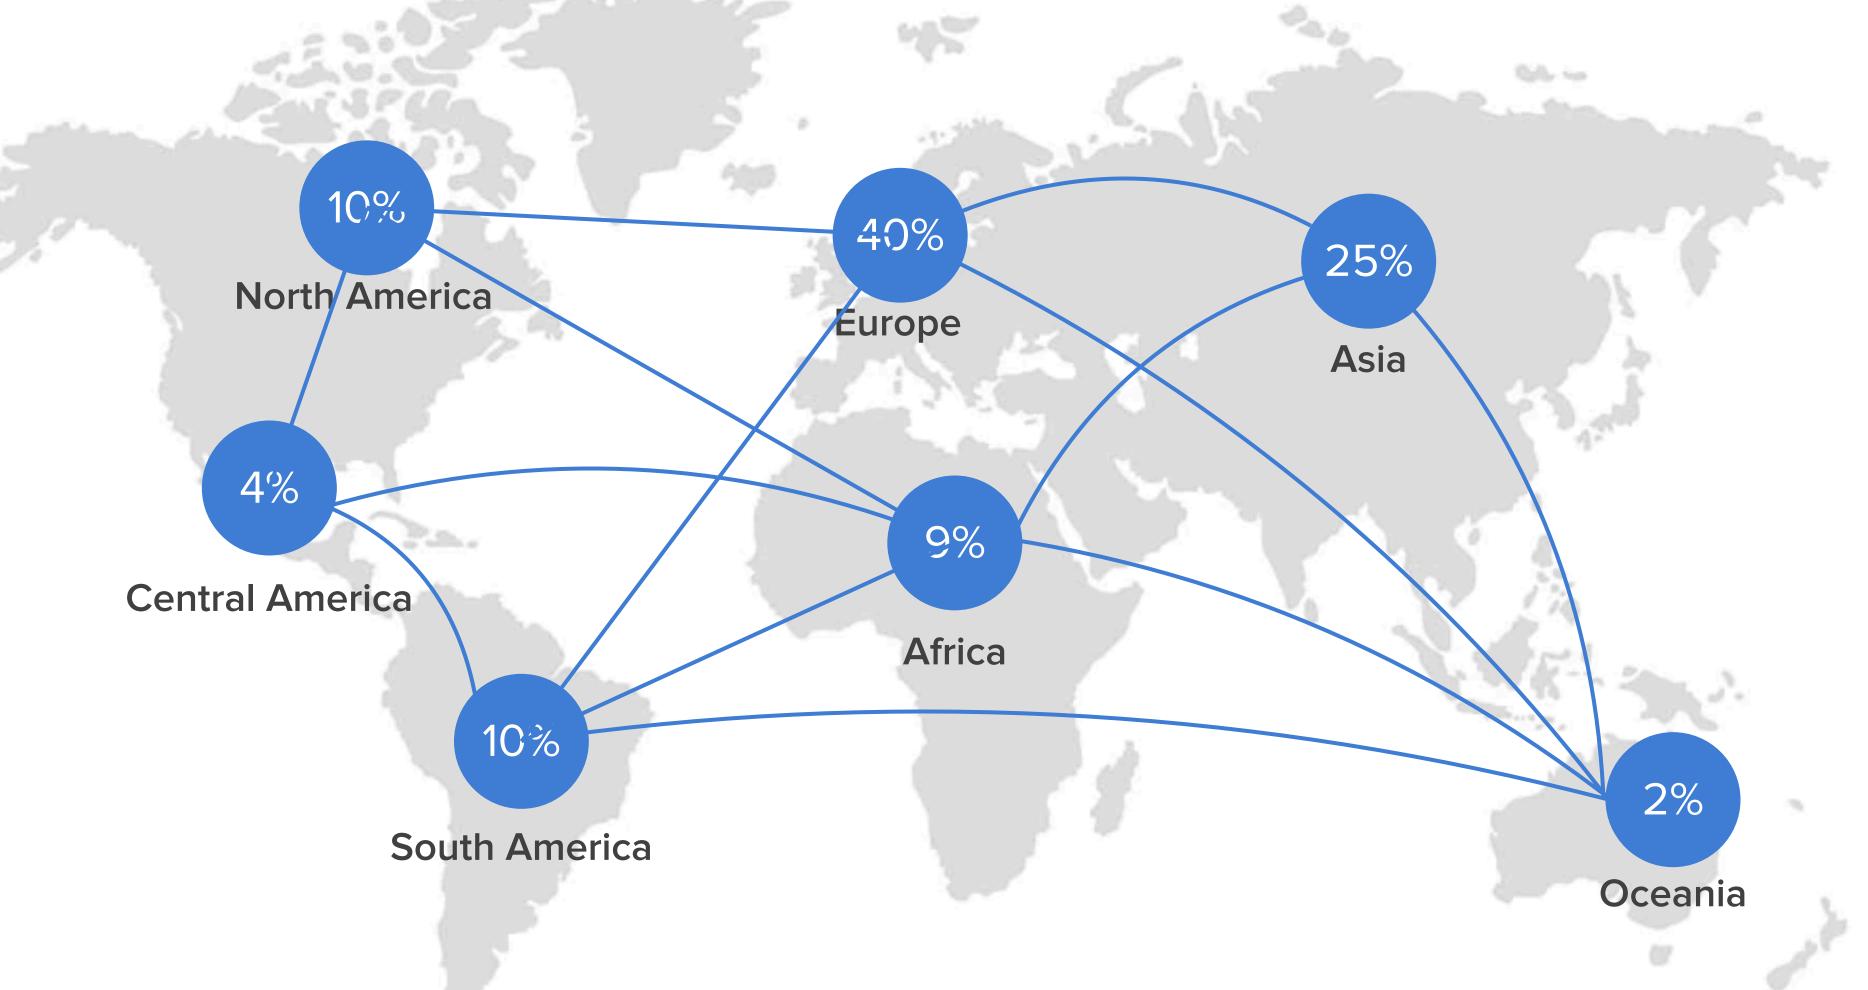

≥ 206 -1-7

A global collaboration movement on the rise

Collaboration happens across all continents and timezones - 187 countries to be precise, with some product teams made up of up to 450 contributors.

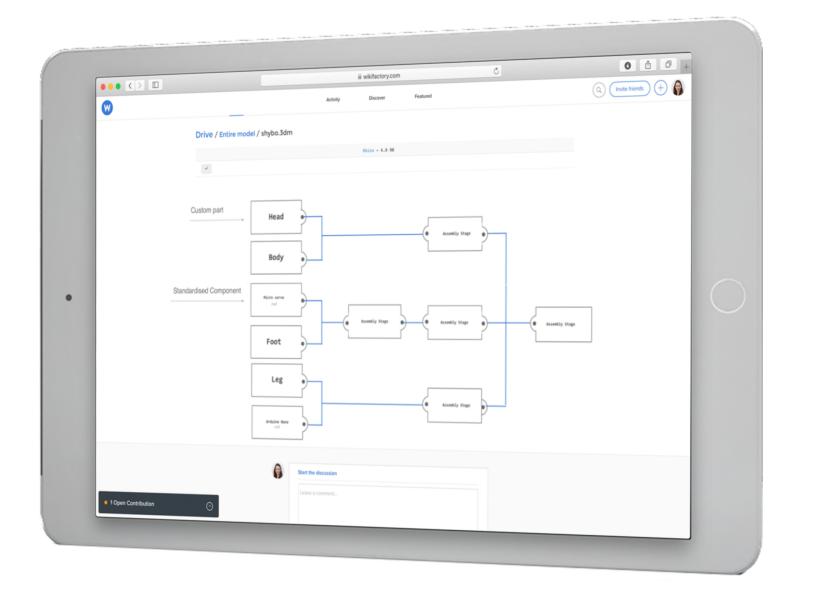

Wikifactory 2.0

Having created a collaborative product development platform, we have now begun to extend it with a design-to-production system and distributed on-demand manufacturing, in a single, seamless workflow.

Compose design-to-production software services (in-house and 3rd-party) in a flow-based visual programming environment.

Define and manage complex production processes including sourcing, part manufacture, and assembly.

The Internet of Production (IoP)

"Linking the productive capacity of smart manufacturing with the creative potential of people."

The Internet of Production is the emerging concept of a distributed, interoperable, open standards-based system linking together product definitions, software services, and manufacturing-as-a-service (MaaS).

We have designed one online workflow for product development composed of:

- 1. Collaborative product development tools
- 2. Design-to-production systems, and
- 3. On-demand manufacturing services

Engineering and manufacturing corporations are investing in intelligent, data-driven manufacturing - Industry 4.0

VS

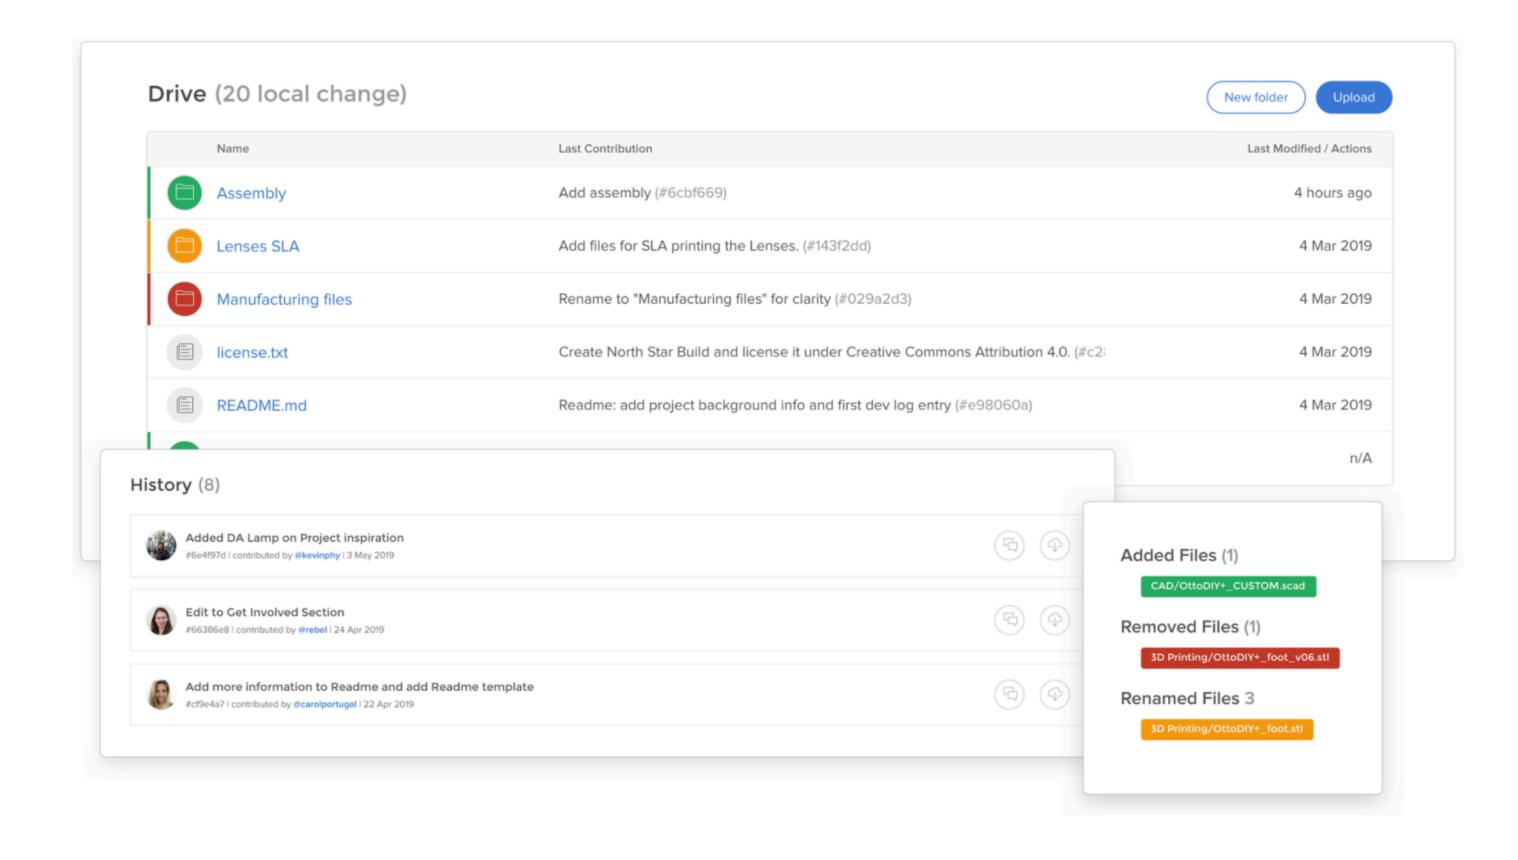

Wikifactory is opening up the same capabilities to everybody by creating the world's first IoP platform.

Collaborate. Design. Prototype. Manufacture.

All from one workspace.

Never ask, "Is this the latest?" again.

Version Control

- Securely store your files in the cloud.
- Easily access or restore older versions.
- Track & manage changes to your product data.
- More transparent development processes.
- Know what changes were made, when and why.
- Spend less time enforcing conventions.

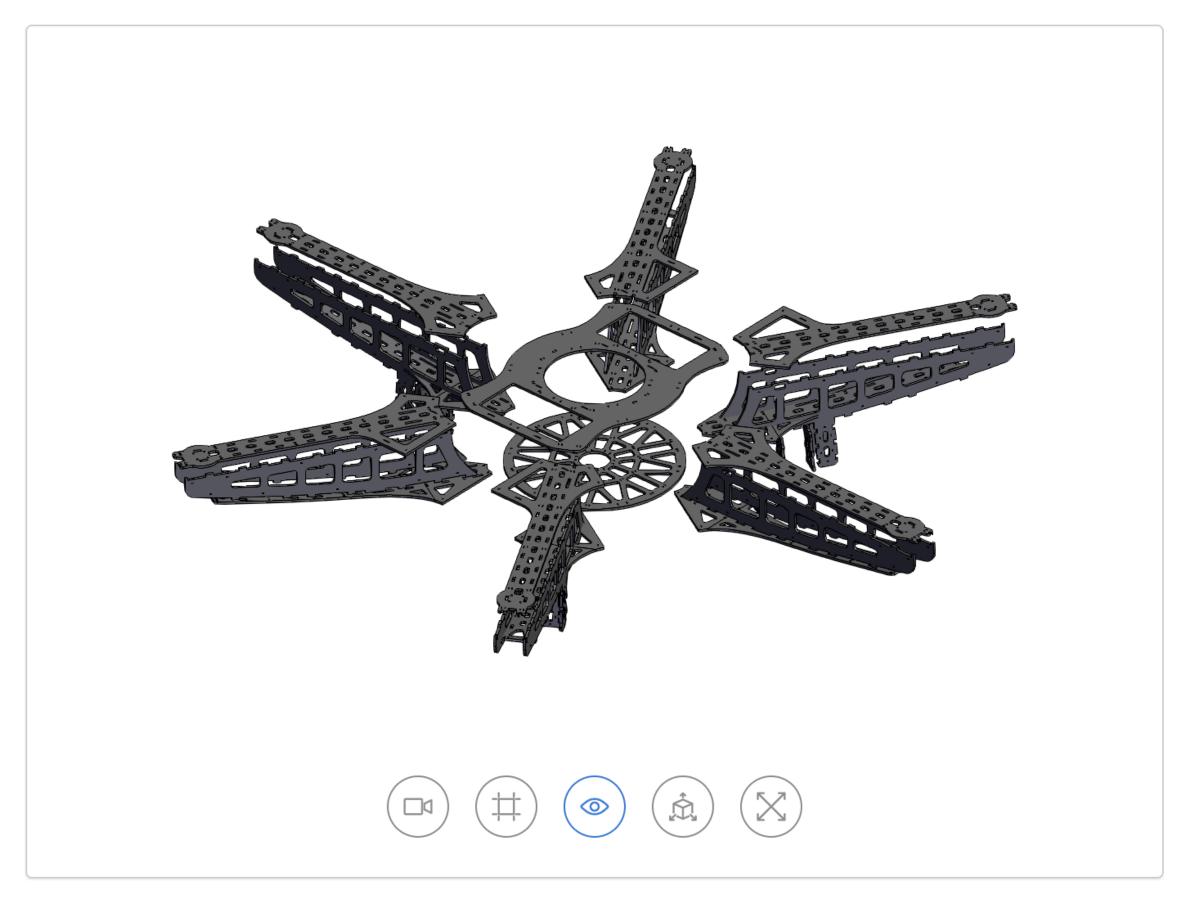

It's powerful version control made intuitive for product designers.

Camilo Parra Palacio
Product Designer and founder of OttoDIY

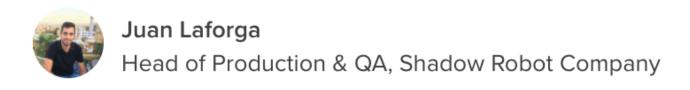

CAD for anyone, from anywhere.

3D Visualisation

- Visualise over 30 formats in the browser.
- Inspect and explode assemblies.
- Keep expensive CAD licenses to a minimum.
- No install or plugins required.
- Runs on mobile and tablet.

Sharing links to 3D files on Wikifactory is infinitely easier than worrying about file size restrictions in emails, and has made communication between our distributed teams a breeze.

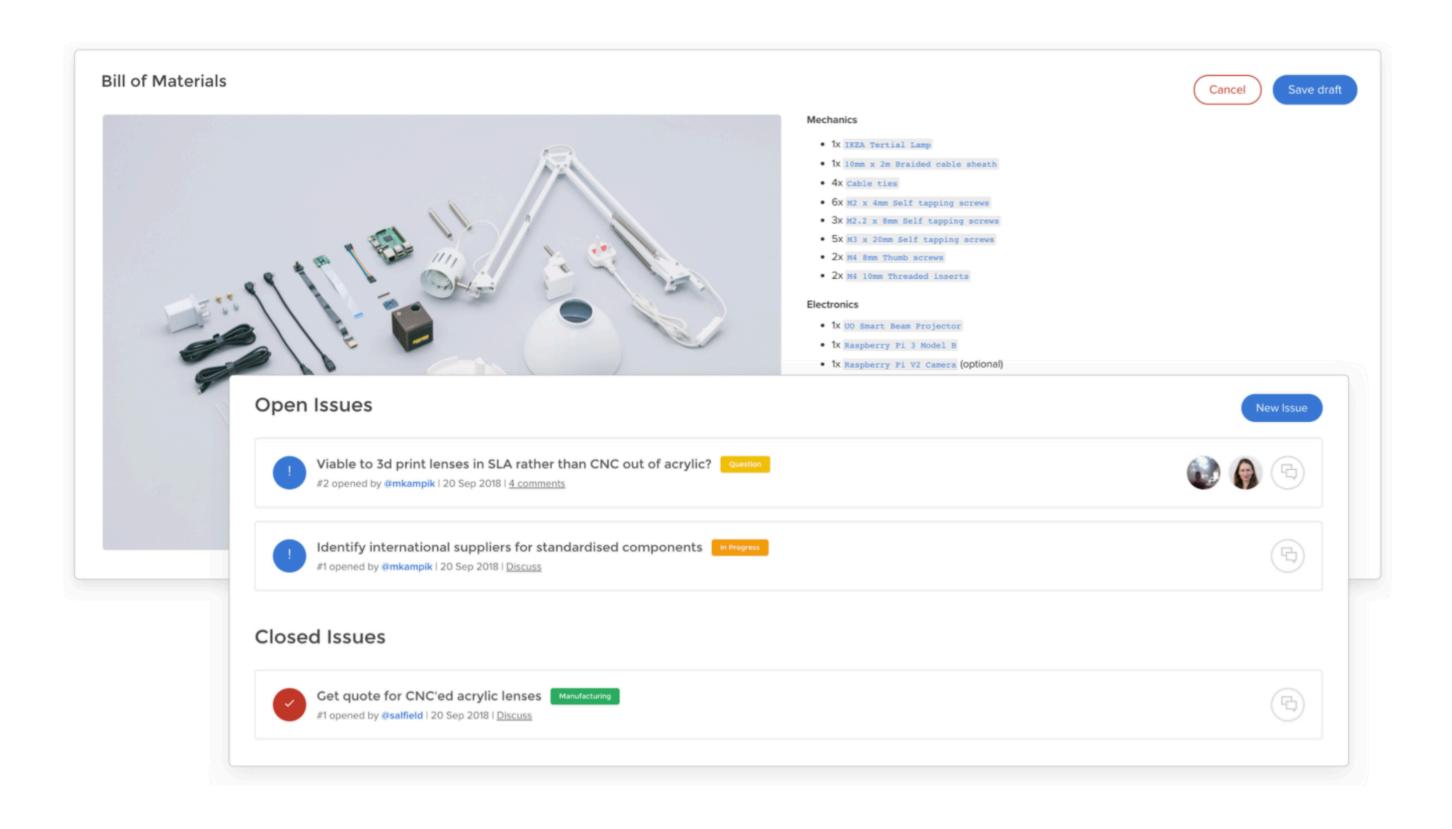

SIEMENS

Iterate faster, be more agile.

Issue Tracker & Documentation

- No more overly bureaucratic change requests.
- Move ideas forward by assigning tasks and labels.
- Find and fix issues faster, even on the go.
- Go beyond words, embed 3d models anywhere.
- Collaboratively improve and share your documentation.

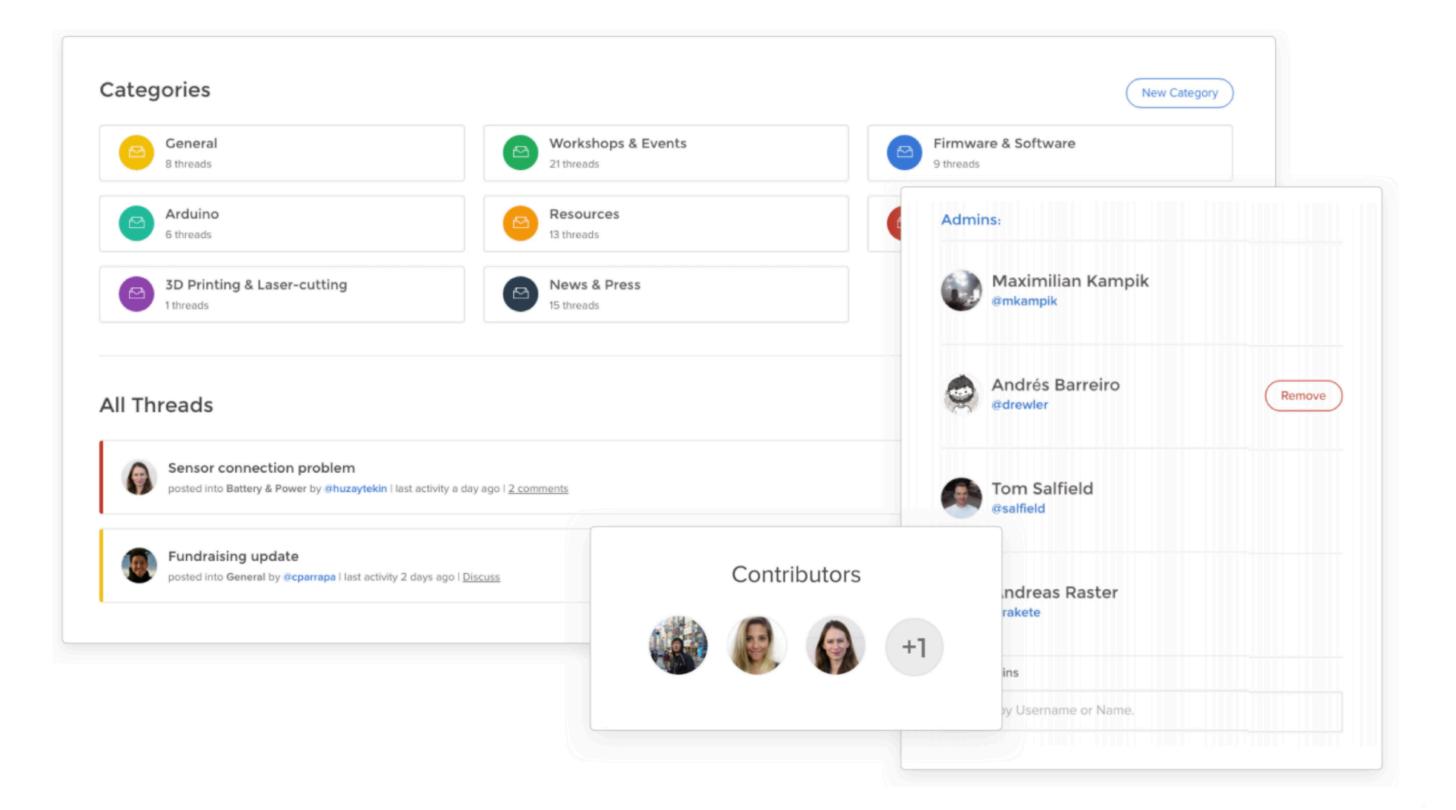

An exciting set of tools for teams to innovate and rapidly adapt their designs to the market.

Jens Martin Skibsted
Founder of Biomega, Partner at Strategic Design Group

Seamless collaboration with stakeholders

Permission Systems and Community Tools

- Enable organisation-wide collaboration with role based permissions.
- Limit access where necessary and create a safe space for sensitive work.
- Tap into a wider community of talented product innovators.
- Build and grow a community around your brand.

With Wikifactory we are able to collaborate more effectively with clients and manufacturers.

Henk Werner
Founder of TroubleMakers, Shenzhen.
